For some reason the button isn't being rendered. I'm sure it's because the $scope.data variable isn't being updated when a new object is returned from the factory, however I'm not sure how to work around this. {{comment.comment}} add more function multilineController($scope) { $scope.data = []; $scope.addNewComment = function () { $scope.data.push({comment: $scope.comments}) } } I've created a fiddle here. Any help would be greatly appreciated. A: This is happening because the reference of the $scope.data gets point to a new array. Instead you have to use $scope.data to keep the reference to the previous array. {{comment.comment}} a1d647c40b
